SOUNDER

Backbox: 1 gang 46mm deep (MK877ZIC)

Model No. 365

Generally sound is an important aspect of the System – in order for colleagues to respond they must be aware that a call has been made.

Separate Sounders provide an alarm tone on activation of the System. Generally the Emergency Call generates a constant tone and an Assistance generates an intermittent tone although there are 27 different tones that can be implemented to suit.

The Sounders are installed in the ceiling or can be wall mounted and can be set from 0 Dbs to 110 Dbs.
