TOTAL OVER DOOR LIGHT (TODL)

Backbox: 1 gang 35mm deep (MK866ZIC)

Model No. 360.9

In order to assist staff when responding to a call on the Pinpoint System, 'Total' Over Door Lights can be positioned where appropriate.

Rooms covered by the System can have a TODL located outside and above the entrance door to that room and can be wall or ceiling mounted.

When the system is activated from within these rooms, the TODL will flash and acts as a further aid to response staff. The TODL can be programmed to flash in a variety of colours to end user requirements e.g. RED, GREEN, BLUE (as shown above), YELLOW, CYAN etc.

Generally, when an ASSISTANCE call is activated, the TODL will flash GREEN, when an EMERGENCY call is made it will flash RED and if there is a CARDIAC ARRESET call, the TODL will flash BLUE. However, the choice of colours can be as required..

In addition, TODLs can be placed at strategic locations to indicate the area or direction of activation i.e. to allow for 'follow my leader' scenarios. These are generally at the junctions of corridors, adjacent buildings etc.
