Rethinking Staff Safety Systems

7 Things You Might Not Know

ASSUMPTION

Staff alarms are **only** used during emergencies.

REALITY

Staff safety systems can support **assistance requests, lone worker** protection and **emergency situations** – helping staff get the right support when they need it.

ASSUMPTION

Staff safety technology is **intrusive**.

REALITY

Modern staff safety systems work **discreetly within existing environments**, with devices designed to be comfortable and practical for everyday use.

ASSUMPTION

Staff safety systems are **only needed** in high-risk environments.

REALITY

Every workplace has different risks. Staff safety solutions can support **healthcare, education, retail and other working environments** where staff may need rapid assistance.

ASSUMPTION

A staff alarm is **just a button.**

REALITY

Modern staff safety systems - like the Pinpoint P2 System - can provide **location identification, connect with other technologies and help coordinate a rapid response** when assistance is required.

ASSUMPTION

Installing a new system means **starting from scratch.**

REALITY

Many staff safety solutions can **work alongside existing infrastructure**, helping organisations enhance their safety arrangements **without unnecessary disruption.**

ASSUMPTION

Staff safety solutions work in **isolation.**

REALITY

Staff safety technology - such as the Pinpoint P2 System - can **integrate with systems** such as CCTV and access control, helping create a more **connected approach to safety and security.**

ASSUMPTION

Staff safety systems **only** matter when something goes wrong.

REALITY

Knowing that reliable assistance is available can help staff feel **supported and confident every day** - not just when an incident occurs.

REALITY

PINPOINT[®]

Staff safety is about more than responding to incidents.

Pinpoint systems help organisations improve communication, support staff confidence and create safer working environments.
