Description

The Cloud Interface (CLINT) is a unit which allows a system to be linked with Mobile Alert. The CLINT picks up all Pinpoint data on the Ethernet it is connected to and transmits it over the internet to our cloud servers. The CLINT is a single-board computer (SBC) running a linux-based operating system (OS).

The CLINT listens to all Etherbridge broadcasts on the clients network. It takes all the data and transmits it through the network to the cloud servers. This in turn can then be used to transmit alarms to relevant user's mobile devices.

The CLINT is a purely plug and play device when supplied to be installed and requires no further configuration. It should be located in any convenient area with network access via an Ethernet connection and a mains power supply.

Model No: 440
Power Source: Mains Power Supply
Size: Height 56.7mm x Width 155mm x Depth 95.2mm
Weight: 203.7g (basic unit)
