

Description

The Transmitter Test Energizer Station encapsulates both the Energizer and the Transmitter Test Station in one convenient unit.

It works in the exact same way the individual units do separately, only housed in the same enclosure. This is particularly beneficial for those looking to 'energize' their PITs and then test the status of the PIT in one streamlined process.

For more information on the individual units, please see the relevant datasheets for the following products:

Transmitter Test Station 317.5

Energizer Station 311

Model No: 313
Power Source: Mains Power Supply
Size: Height 190mm x Width 300mm x Depth 220mm
